

Curriculum Enrichment Organiser - DEMO Version

Organising a successful curriculum enrichment programme for schools can be a highly complex and very time consuming task. However, the outcomes for both students and staff are usually highly beneficial and can be a major contributory factor in providing a positive school ethos.

The ***Curriculum Enrichment Organiser (CEO)*** program was originally created for ***Worle Community School*** in 2005 and has been extensively developed in succeeding years. The software is now available for use by other schools for the first time.

The ***CEO*** program was designed to manage all aspects of a school curriculum enrichment programme for an annual enrichment week and/or individual enrichment days including:

- organisation of activities and risk assessments
- production of activity booklets
- allocation of students and staff to activities based on choices made and spaces available
- timetabling of rooms to activities
- student medical and parental contact information
- management of bookings and transport for external trips
- organisation of staff cover in case of absence
- finance including student payments and activity costs
- monthly / weekly / daily calendar events
- staff and student timetable viewer
- mail merge letters & group emails
- student attendance

The demonstration version of the program will run in any version of Windows and requires the use of ***Microsoft Access*** (version 2007 or later). It is supplied with example staff, student and activity data based on a fictitious school, Mendip Heights.

When testing the demo version, you will need to login with a user name & password – both are ***999***.

The example data provided will allow schools to try out all the main features of the program in order to decide whether it will suit individual school needs before purchasing the full version.

Please click the ***Install DEMO*** button on the CD in order to try out the program features.

Additional details are available by clicking the ***Program Features*** button.

The full version of the program allows schools to easily import student and staff data from ***SIMS***. Alternatively, schools that have purchased the separate ***School Data Analyser / Reports Manager*** programs will be able to use these as a data source.

The full version also uses other programs in the ***Microsoft Office suite (Word / Excel)***. All data is stored in ***Microsoft SQL Server*** as this provides a highly secure and stable platform. A free version of ***SQL Server*** can be obtained from the Microsoft website.

The program can be fully customised to individual school requirements. It is open source software and schools are given full access to the program code.

Further details and prices are available by clicking the ***Upgrade Info*** button

If you are interested in purchasing the full version, please email sales@mendipdatasystems.co.uk

You will then be provided with a license key to unlock the full version.
